

**Suicide Ideation Survey – Spring 2006
Survey Codebook**

Final Revision
June 2006

Conventions	
Question Numbering Q2, Q3A, ...	Each distinct question is numbered sequentially in presentation order. Some questions invite responses on several points; these various points share the same question number, but have a sequential letter appended to differentiate them.
Survey Content “Your age:”	The text of each question as well as all potential responses are included in this codebook. Anything marked with quotes is taken verbatim from the survey.
Response Options 1 = “Yes”	The response options for each question are indicated on the right side of the each row. In the case of questions with multiple data points, the response options presented apply to each point. In some cases, a question has the same response options as a previous question, and will refer back to it.
Missing Values	For the majority of questions, a missing value is indicated by a blank; this may be due to either the respondent skipping the question or a skip pattern. The one exception is multiple choice questions, in which a ‘0’ indicates a particular option has not selected.
Skip Patterns [Q3F = 1]	Simple skip patterns, in which the availability of one or two questions is dependent on another close question, are indicated by an expression in brackets; the majority of these represent opportunities to provide an explanation for an “other” response. Larger skip patterns, in which entire sections of questions are skipped, are indicated by separate rows labeled “Skip:”, with explanations of the pattern.
Question Groups	The study contains several groups of questions, in which a series of questions all relate to and depend on a previous question. These groups are preceded by a separate row labeled “Group:” which explains their relation and the skip pattern controlling them. Further, the questions in each group share the same number, with sequential letters appended.
Required Questions	The respondent was only required to answer two or three questions that controlled the large skip patterns of the survey. These questions are marked in the code book with “(respondent is required to answer this question)”.

Response	A fully anonymous number that uniquely identifies the response.	(integer number; always present)
Duration	The duration of the response in minutes. Due to a variety of factors this value should not be considered very accurate.	(integer number; always present)
Affiliation	A unique number which identifies the school of the respondent.	(integer number; always present)
School	The school attended by the respondent.	(text; always present)
Class	A number indicating if this respondent was marked as being an undergraduate or graduate level student.	1 = undergraduate 2 = graduate
