Measles Immunization Exemption for Reasons of Conscience, Including Religious Beliefs

The University of Texas at Austin requires entering students to submit evidence of immunity to measles by vaccine or positive blood test showing protective antibodies to measles. If you do not wish to be protected against measles and, instead, request an exemption for reasons of conscience, including religious reasons, please read and complete this form.

Measles is a highly contagious disease caused by a virus. It is transmitted from person to person primarily by droplets in the air after an infected person coughs or sneezes. The measles virus can remain in the air up to two hours after an infected person has been in the room. You can become infected by merely being in a room where an infected person has been. Up to 90% of people who come near a person infected with measles will become infected if they are not protected by a vaccine.

Infected persons are contagious from four days before the onset of a rash to four days after the rash appears. Consequently, you can become infected by a person before they know they are infected. Vaccination within 72 hours may prevent disease in those who have not received two measles, mumps, and rubella (MMR) vaccines.

The MMR vaccine is safe and can prevent measles, mumps and rubella. Two doses of MMR vaccine are about 97% effective at preventing measles; one dose is about 93% effective. Read more MMR vaccine risk/benefit information in the U.S. Centers for Disease Control and Prevention MMR Vaccine Information Statement. Health insurance will probably cover the cost of a MMR vaccine. If you are uninsured, UHS can help you apply for a free vaccine through the manufacturer. If UHS does not accept your insurance, our staff can inform you about where to receive the vaccine.

Texas law requires healthcare providers to report every measles diagnosis to the patient’s local health department. If Austin Public Health (APH) declares that a measles outbreak is occurring, APH (as the public health authority in Austin) may elect to ban you from campus if you have not provided evidence of immunity to measles. You would be unable to attend classes until APH determines the outbreak has resolved. This has the potential to impact your academics negatively, including your grades.

I have read the information above and the U.S. Centers for Disease Control and Prevention MMR Vaccine Information Statement and have had an opportunity to ask questions and have my questions answered.

I have chosen not to be vaccinated against measles.

I understand I can receive the MMR vaccine at University Health Services (UHS).

I understand I can change my mind and receive the MMR vaccine at any time.

I understand that, if there is a measles outbreak at The University of Texas at Austin, I may be excluded from campus and classes until the outbreak has resolved or until I submit evidence of measles immunity.
